Setup

Market and Keyword Research: At the launch of our SEO services, we perform research into keywords, geographical targets, and local competitors to identify the best opportunities. We utilize this research, along with your input, to generate a keyword list and help build out an initial strategy.

Search Engine Verification: We verify all our SEO clients in Google Search Console and Bing Webmaster Tools. These accounts provide a wealth of data related to the health of the site and are used for finding opportunities and identifying potential issues.

Initial Site Optimization: We perform initial optimization for core areas of your website, such as the homepage, new and used inventory and financing pages and more. This optimization includes customized HTML content, internal linking, and custom meta data, all aimed at enhancing search engine visibility for targeted keywords.

SEO Audit: In the first month of service, we perform an in-depth audit of your SEO content and web presence. We examine your website's current organic visibility and provide action items based on our findings. Results of your audit are provided via phone and/or email.²

Schema.org Implementation: As part of the initial optimization, we implement basic schema.org microdata specifically designed for auto dealers (schema.org/AutoDealer) on your homepage to help the search engine better understand the content.

Analysis & Support

Weekly Keyword Reporting: Post research, we track and monitor your rankings on Google, Bing, and Yahoo weekly to analyze how your website is performing in the organic search results over time.
